Initial Release: April 27th, 2022
Release Date : June 1st, 2022
Version 1.2

Android Malware Detection Test Plan

AMTSO Standard Compliance Statement

This Test has been designed to comply with the Anti-Malware Testing Standards Organization, Inc. (“AMTSO”) Testing Protocol Standard for the Testing of Anti-Malware Solutions, Version [1.3] (the “Standard”). This Test Plan has been prepared using the AMTSO Test Plan Template and Usage Directions, Version [2.4]. TGL is solely responsible for the content of this Test Plan.

TGL Android Malware Detection Test

1. Introduction

Android is a mobile operating system developed by Google. It is based on a modified version of the Linux kernel and other open-source software, and is designed primarily for touchscreen mobile devices such as smartphones and tablets. In addition, Google has further developed Android TV for televisions, Android Auto for cars, and Wear OS for wrist watches, each with a specialized user interface. Variants of Android are also used on game consoles, digital cameras, PCs and other electronics. Android's smartphone share will hover with around 85% throughout the forecast. Volumes are expected to grow at a five-year compound annual growth rate (CAGR) of 1.7% with shipments approaching 1.36 billion in 2022. Android maintained its position as the leading mobile operating system worldwide in June 2021, controlling the mobile OS market with a close to 73 percent share. Google's Android and Apple's iOS jointly possess over 99 percent of the global market share. Overall this is a positive sign that consumers are seeing the benefits of moving to a slightly more premium device than they likely previously owned.

Aside from the clear advantages to build mobile devices on Android, the platform also introduces numerous security risks to the platform users. Among them the following malicious activities:

1. Send messages to "premium service" SMS numbers that cost extra money.
2. Send your personal information to unknown parties.
3. Turn your phone into a part of a botnet so others can execute commands remotely for nefarious purposes, such as spam, DDOS attack, and more.
4. Non-authorized persons may monitor your phone calls and text messages.
5. Open you to blackmail, if something embarrassing can be found and sent elsewhere.
6. Trick you into entering financial information, such as account number, birth date, and more.
7. Even stuff on your PC if you connect your PC to your smartphone.

Clearly, to protect user's system and the data from the lists threats and the others, Android-based security applications exist and their efficiency is to be controlled regularly, since the threats are permanently evolving.

This test is designed to independently assess the efficiency of consumer security solutions for Android OS on detecting currently spread malicious mobile apps.

2. Scope and Participants

In this test Testing Ground Labs plans to reveal capabilities of consumer security solutions for Android OS to detect Android threats, collected from different sources, as well as to check their resistance to False Positives. As a result of the test, certification mark will be granted to security solutions depending on their results. Additional, Testing Ground Labs plans to examine consumer security solutions for Android OS from the following companies (Test Subjects). Specific Test Subject Vendors and Participants will be determined after the Public Test Notification has been issued.

Vendor	Software
<i>AhnLab</i>	<i>AhnLab V3 Mobile Security</i>
<i>Antiy Labs</i>	<i>AVL for Android</i>
<i>Avast</i>	<i>Avast Mobile Security</i>
<i>Avira</i>	<i>Avira Antivirus Security for Android</i>
<i>ESET</i>	<i>ESET Mobile Security</i>
<i>Kaspersky</i>	<i>Kaspersky Internet Security for Android</i>
<i>Malwarebytes</i>	<i>Malwarebytes for Android</i>
<i>McAfee</i>	<i>McAfee Mobile Security</i>
<i>NortonLifeLock</i>	<i>Norton 360 (Norton Mobile Security)</i>
<i>Trend Micro</i>	<i>Trend Micro Mobile Security</i>

3. Methodology

Detailed process is as follows.

1. Several Android based mobile devices are prepared and backup images are created then. Platform: PixelExperience Android 10 on Redmi Note 4X.
2. Collect about 2000 of malware samples and bulks of clean android applications (about 500 different installers) and deliver the mixed collection to the internal storage of devices. The malware is collected from multiple sources (including China region-based ones), clean apps are taken from Google AppStore and other legitimate app stores.
3. Install a security application on the physical phone device with default configuration.
4. Update the security application and its antivirus bases.
5. Run full scan against the malware set and clean applications. Malware detection and false positive rates are recorded.
6. Restore the backup image on each of the mobile device and repeat steps 2-4.

4. Participation

Testing Ground Labs chooses security solutions of interest to include into this test. Additionally, any vendor may submit request to participate in the test. Testing of either security solution (both chosen by Testing Ground Labs and submitted by a Vendor directly) is free of charge to the Vendor. Every Vendor will be provided with the feedback process, which means that the test lab will share test results with Vendors and they will have chance to investigate the results and submit disputes in case of any.

Opt-Out Policy: If any Vendor manages to supply sufficient reason as to why Testing Ground Labs should not include their products in an upcoming or on-going test, Testing Ground Labs will honor that request provided.

Conflict of Interest Disclosure: No known conflicts of interest exist at this time.

Funding: This test is free of charge. Any Vendor who would like to get post-test service or any other extra service, can email us. Results (reference or direct use of the test report or seals) would be allowed to use only in case of marketing rights agreement between Testing Ground Labs and the interested Vendor.

5. Environment

Physical Configuration: Redmi Note 4X, Android 10, 4GB with 64 GB internal storage.

Sample Relevance: Malicious and non-malicious android installers are collected by Testing Ground Labs threat collection system during the past 2 months. The malware is collected from multiple sources (including China region-based ones). Non-malicious (clean) apps are used to check the level of false positive detection. Candidates for legitimate sample testing include newly released applications collected by multiple public app stores (including but not limited to Google AppStore).

Curation Process: Malicious and legitimate applications are independently verified by Testing Ground Labs.

Distribution of Test Data: Malicious and non-malicious apps data with non-optimal results are provided to vendor once the full test is complete. Testing Ground Labs does not share data on one vendor with other vendors. Any security vendor whose product was tested, may request hashes of their missed samples/false positives.

6. Schedule

Start Date Range: Test configuration is scheduled to begin on 6th June, 2022 and the Test commencement is forecast for 10th June, 2022

Test Duration and Calculated End Date: The final Test Report is anticipated during the week of July 4 2022.

Milestones: Interim schedule milestones are listed below.

<i>Sample Schedule Summary for Test Project</i>			
Index	Test Activity	Start Date Range	Dependencies
<i>1</i>	<i>Test Commencement</i>	<i>June 10 2022</i>	
<i>2</i>	<i>Confirm Vendor Configuration Feedback</i>	<i>June 6 2022 – June 10 2022</i>	
<i>3</i>	<i>Milestone 1 – Preliminary Results</i>	<i>June 20 2022</i>	<i>(1), (2)</i>
<i>4</i>	<i>Milestone 2 – Test Report First Edition – End of Testing Period</i>	<i>June 24 2022</i>	<i>(3)</i>
<i>5</i>	<i>Feedback and Dispute Resolution Time – Retests as Needed</i>	<i>July 1 2022</i>	<i>(4)</i>
<i>6</i>	<i>Milestone 3 – Issue Final Report – End Date for Test</i>	<i>July 8 2022</i>	<i>(5)</i>

Communications: All Participants will be notified when the schedule changes by two weeks or more.

Risks and Risk Management: No additional risks are known at this time.

7. Control Procedures

Connectivity Validation: All the security solutions in the test will be granted access to their cloud reputation and other services, which is the way how it works for end-users in real life.

Logging: Instructions for enabling logging within the Product must be provided by the Participant upon request to Testing Ground Labs.

Updates: Any configuration information needed for product updates to take place during the Testing Period should be disclosed by the Participant.

8. Scoring Process

For each security solution, a Final Score is calculated once the full test is performed:

$$\text{Final Score} = (\text{Detection \%}) * 100 - 0.1 * \text{FP}$$

Basing on the Final Score, the correspondent rating is graded to each participating security solution, in accordance with the tab below:

final score	monthly award
98.00 - 100.00	5 star rating
95.00 - 97.99	4 star rating
90.00 - 94.99	3 star rating

9. Dispute Process

The dispute process runs for ten business days commencing from the end of the test. Refer to Section 6 covering the Test Schedule for additional details and timing. The general Dispute Process works as follows.

1. Testing Ground Labs provides Vendors with results their security solution with hash values associated with any sub-optimal results.
2. Vendor responds within ten business days to Testing Ground Labs, providing fact-based disagreements with any sub-optimal results, in case of any.
3. Testing Ground Labs responds with decision, if the dispute is accepted or denied.

10. Attestations

I understand and agree that I am submitting this Test Plan, and the following Attestations, on behalf of the entity listed below, and I represent and warrant that I have authority to bind such entity to these Attestations. All references to “I” or “me” or similar language refer to such entity. I represent and warrant that the following Attestations are true, to the best of my knowledge and belief, and each of the following commitments will be upheld to the best of my ability.

1. I will provide public notification on the AMTSO website covering my obligation for notification of a Public Test, regardless of whether a potential Participant is in actual receipt of such notification prior to the Commencement Date of a Test. (Section 1, Section 4, Section 6)
2. All products included in this Test will be analyzed fairly and equally. (Section 2, Section 3, Section 5)

3. I will disclose any anticipated or known imbalance or inequity in the Test design to all Participants in the Test. (Section 2, Section 3)
4. Although I may charge for participation in a Test, I will not charge any additional fees for a vendor to be a test subject under the Standards. (Section 4)
5. I will disclose any material conflicts of interest or other information that could materially impact the reliability of the Test. (Section 4)
6. I will disclose how the Test was funded. (Section 4)

I hereby affirm, to the best of my knowledge and belief that this Test Plan complies with the AMTSO Testing Standards, as of the date hereof.
